

Minimize Patient & Provider Exposure to COVID-19 Pandemic with EmOpti High Throughput Telehealth

Virtual Intake & Discharge Consults Using Your Providers & EmOpti Technology

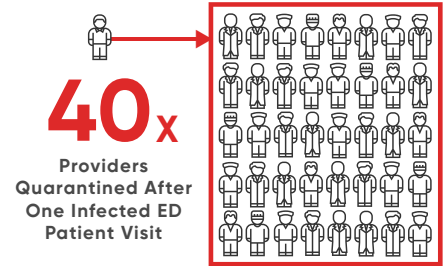

Rapid Solution Needed to Remotely Manage High Volume Screening & Discharge of COVID-19 Patients

Multiple mitigation strategies and new approaches are needed. But the number of patients presenting to emergency departments and other alternative care sites will increase drastically.

EmOpti's software platform is a turn key solution that enables virtual visits to be deployed on a large scale in health care facilities in as little as one week. The software is uniquely designed for queue management across multiple personnel, multiple facilities and multiple patient facing devices, using efficient high-speed workflows that take advantage of existing medical record systems.

With awards from both ACEP and AHA in the past year, EmOpti's proven secure technology empowers remote doctors and nurses to address high volume patient flow, including up to 20+ virtual intake consults per hour per provider.

Eliminating Provider Exposure is Essential to Pandemic Response

IN-HOSPITAL COVID-19 TRANSMISSIONS FOR CLINICIANS
At one New York ED, an infected patient led to the quarantine of 40 health care providers.¹

"My team isn't at risk of exposure when working remotely, and if our providers are in quarantine themselves they can still contribute to our patient care."
Director of Emergency Services

- Rapid Implementation of Turnkey Telehealth in ED; Ready to Use in 7 Days After Ordering**
- FREE Software for 90 Days & Runs on Hands-Free Tablets, Not Expensive Carts**
- Built for High Volume ED Consults; 20+ Hourly Consults per Remote Provider**
